DEPARTMENT OF COMMERCE
BUREAU OF THE CENSUS

Abstract—The purpose of this study was to determine the effect of a 10-week, 1000 kcal energy deficit diet on the body composition and physical fitness of obese women. The subjects were 15 obese women who were randomly assigned to either a control group or an experimental group. The control group was instructed to maintain their current diet and lifestyle, while the experimental group was instructed to follow a 1000 kcal energy deficit diet. The subjects were assessed at baseline and at 10 weeks for body composition and physical fitness. The experimental group showed a significant decrease in body weight, body fat percentage, and waist circumference, and a significant increase in physical fitness. The control group showed no significant changes in body composition or physical fitness. The results of this study suggest that a 10-week, 1000 kcal energy deficit diet is effective in improving body composition and physical fitness in obese women.
